Skills

SQL, Python, Tableau, Excel, Pandas, NumPy, SciPy, EDA, Statistical Analysis, A/B Testing, Hypothesis Testing, Feature Engineering, Data Visualization

Experience

Wipro Technologies

Oct 2011 – Jan 2014

Project Engineer

- **Delivered** production-ready SQL enhancements for **TrackIT**, a business-critical **Shell** application, translating business requirements into reliable enterprise solutions.
- **Automated** a manual Excel-to-application workflow using SQL, reducing processing effort by **90%** and importing thousands of records in minutes.
- **Developed & Optimized** complex SQL queries and database solutions to resolve production issues, implement enhancements, and support operational reporting.
- **Collaborated** with stakeholders across the **Netherlands, United Kingdom, China, and India** to deliver application enhancements and resolve complex production issues.
- **Architected** a 100-page production system playbook **by** auditing end-to-end application schemas, **accelerating** backup engineer training timelines **by** 50%.

Projects

[Brazil E-Commerce Sales & Customer Analytics](#) 🔗

SQL • Google BigQuery

- **Analyzed 100K+ e-commerce orders** using **SQL JOINS, CTEs, and window functions**, uncovering customer behavior, payment trends, and regional demand.
- **Identified 137% YoY revenue growth** and **Black Friday demand spikes**, recommending inventory optimization, targeted promotions, and regional marketing strategies.
- **Evaluated** delivery performance across **27 states**, revealing **3× regional delivery disparities** and recommending warehouse placement and logistics optimization.

[Delhivery Logistics Route Optimization](#) | 🔗

Python • Pandas • NumPy • Feature Engineering • EDA

- **Engineered 29 trip-level features** from **144.9K shipment records** across **14.8K trips**, enabling route-level analytics and logistics forecasting.
- **Discovered** actual delivery times averaged **95% higher than OSRM estimates** through route performance analysis, recommending ETA recalibration to improve delivery planning.
- **Identified Week-38 demand peaks** and **5 high-volume logistics corridors** using temporal and route analysis, recommending proactive capacity planning and warehouse allocation.

[Yulu Shared Mobility Demand Analysis](#) 🔗

Hypothesis Testing • ANOVA • T-Test • Chi-Square

- **Analyzed 10.9K+ bike rental records** using hypothesis testing to identify seasonal, operational, and environmental factors influencing shared mobility demand.
- **Validated** significant seasonal demand differences using **One-Way ANOVA (F=243.34, p<0.001)**, recommending **season-based fleet allocation**, preventive maintenance and targeted off-season promotions.
- **Identified ~65% YoY growth** in average rentals and **5–6 PM peak demand**, recommending **fleet expansion** and bike redistribution to reduce stockouts during peak hours

Education

Specialisation in Data Science and Machine Learning <i>Scaler Academy</i>	2026
BE/B.Tech/BS <i>PES Modern College of Engineering, Pune</i>	2011

Achievements

- **Ranked 1st** in Wipro's technical training program (**78.8%**), demonstrating strong technical aptitude early in my career.
- **Designed, built, and published** two Android applications (**Quiz Master** and **Stock Sage**) on the **Google Play Store** using AI-assisted development workflows.
